## SC1072 StealthCam™ Camera & DVR In A Recluse Black Box

It looks like a black box but is it? The StealthCam Recluse is an all-inclusive recording device in a simple small black box. The enclosed DVR and camera become invisible as the plain black case blends into any background. Inside this ordinary looking black box is actually a motion activated camera, with a recording system using a SD card for Memory, The Stealth Cam Recluse can go anywhere and record everything without attracting any attention. Just Set the box in your desired location and begin recording.

The Recluse has a built-in CMOS color camera that has a low Lux rating with a 75° view and a rechargeable Li-polymer battery that will power the device for approx 6 hours of continuous recording. With its easy to operate on screen menu and functional LED indicators, operating this stealth camera is a breeze.

### Specifications

- Video System: NTSC
- Video Resolution: 320x240, 640x480
- Picture Resolution: 640x480 @ 1 frame per 3 seconds
