

DigiCam Surveillance

SC9200C Color StealthCam™ Camera & mini DVR w/30FPS Wall Clock

Sporting Motion detection, MPEG 4, 30FPS, JPEG images for even longer record time, and Time & Date stamp. For ease of storage the StealthCam™ records directly to a SD card.

The StealthCam™ is the only unit on the Market today that can play back directly from the unit itself. Just connect the provided RCA Cable to any TV or Monitor to see what has been recorded or you can take the SD Card out of the unit, use the provided card reader, view the video right from a PC using Windows Media player. Now we alleviated the need for any additional software. It's just that easy.

Capable of being built into different styles and featuring a knockout price, StealthCam™ is the only nanny cam you should stock.
